

Data Science Project Two Guide

My Project Contains 4 Main Coding Articles:

- **DS2.py**
 - Contains the flask app code and the methods I used to create a chatbot using Spotify's API Developer Dashboard
- **etl.py**
 - This is my ETL pipeline. I used Spotify's api developer dashboard to collect Spotify popularity ratings and put them in a CSV that will be used by my chatbot to answer questions regarding popularity scores
- **Artist_popularity_scores.csv**
 - This is the csv file generated from my etl.py code. It contains two entries with 553 data points. This contains the most famous artists and their spotify popularity scores
- **bot.py**
 - This contains the code for my Discord bot I made for extra credit. Integrated with my code from [DS2.py](#) but must be in the same folder in order to work

How to run my code:

- 1) Create Virtual Environment-`python3 -m venv venv`
- 1) Add a SSH line using Google Cloud username and VM external IP- `ssh <username>@<external-IP>`
- 2) Mine is `jacksonshaiz@34.86.241.15`- the one I will be using for the project
- 3) Activate it- `source venv/bin/activate`
- 4) Upload etl.py and DS2.py
- 5) Run etl.py by typing "`python etl.py`" into the VM script
- 6) This will generate my `artist_popularity_score.csv` into the gm instance, no need to upload it yourself!
- 7) Run DS2.py by typing "`python DS2.PY`" into the VM script"
- 8) Visit: <http://34.86.241.15:5000/> which will welcome you to my spotify chatbot assistant!

9) To begin chatting (I used postman for this step), type

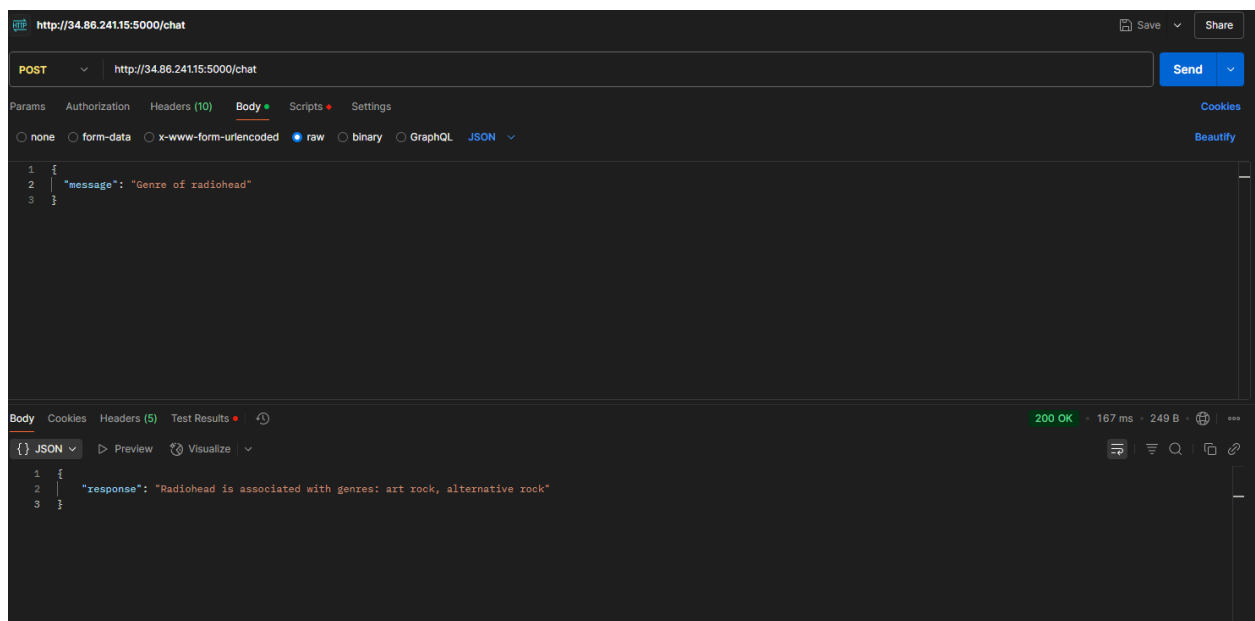

<http://34.86.241.15:5000/chat> into the postman link

10) My code has 5 main questions that can be answered about spotify artists!

- a) Track Info
- b) Popularity Score
- c) Top songs by an artist
- d) Albums by an artist
- e) Genre of an artist!

Here are pictures of messages you can send!

Genre

Album

The screenshot shows a REST client interface with the following details:

- URL:** `http://34.86.241.15:5000/chat`
- Method:** `POST`
- Body:**

```
1 {  
2   "message": "Albums by the strokes"  
3 }
```
- Response:** `200 OK` (279 ms, 331 B). The response body is

```
1 {  
2   "response": "Albums by The Strokes: Is This It, Angles, The New Abnormal, First Impressions Of Earth, The Singles - Volume 01, Room On Fire, Comedown Machine"  
3 }
```

Top songs:

The screenshot shows a REST client interface with the following details:

- URL:** `http://34.86.241.15:5000/chat`
- Method:** `POST`
- Body:**

```
1 {  
2   "message": "Top songs by the strokes"  
3 }
```
- Response:** `200 OK` (906 ms, 384 B). The response body is

```
1 {  
2   "response": "Top tracks by The Strokes: The Adults Are Talking, Reptilia, Someday, Last Nite, Selfless, You Only Live Once, Call It Fate, Call It Karma, Ode To The Mets, Hard To Explain,  
3     Under Cover of Darkness"
```

Track Info

REST client interface showing a POST request to `http://34.86.241.15:5000/chat`. The request body is raw JSON:

```
1 {
2   "message": "track info for paranoid android"
3 }
```

The response is a 200 OK status with a response time of 221 ms and a body size of 338 B. The response body is JSON:

```
1 {
2   "response": "Track: Paranoid Android\nArtist: Radiohead\nAlbum: OK Computer\nRelease Date: 1997-08-28\nListen: https://open.spotify.com/track/6Lg3vI8Xdtc73R3Immpotq"
3 }
```

Popularity Score

REST client interface showing a POST request to `http://34.86.241.15:5000/chat`. The request body is raw JSON:

```
1 {
2   "message": "Popularity score for taylor swift"
3 }
```

The response is a 200 OK status with a response time of 43 ms and a body size of 229 B. The response body is JSON:

```
1 {
2   "response": "Taylor Swift has a popularity score of 844."
3 }
```
